

Withwave's W-Absorber is microwave absorber in thin sheet format made of a mixture of polymer resin and metal magnetic powder which is thin and flexible and excellent in workability and can be easily bonded. This absorber can suppress radiation noise of electronic devices for wideband microwave frequency range and reduce surface current as well as surface reflection in cavity resonant application.

■ Features

- Available for Microwave Freq. range
- Lightweight, flexible, thin and excellent processability
- Wide absorption bandwidth
- Included Adhesive tape on backside

■ Markets

- Commercial communications
- Security and Defense
- Antenna Chamber
- Automotive, general electronics

Adhesive tape on backside

■ Applications

- W-Absorber can suppress radiation noise of electronic devices for wideband radio frequency range and is effective in reducing surface current as well as surface reflection in cavity resonant applications due to the high magnetic loss characteristics of materials.
- It suppresses the reflection inside the microwave module and is used to reduce cavity resonance of the module.
- It is particularly suitable for use in masts of ships and walls to reduce reflections and echoes to nearby antennas and to reduce overall radar signatures by attaching to vehicles.
- It can be used for various applications such as anechoic chamber, medical equipment facility.

■ Availability

- Standard sheet size : S1 (105 X 150 mm) , S2 (150 x 210 mm), S3 (210 x 300 mm : A4 Size)
- W-Absorber can be used in different sizes, thicknesses and custom configurations on request.
- Thickness depends on the desired resonant frequency, and other resonant frequencies are available according to special request.

■ Instructions for USE

- W-Absorber is designed to function directly in front of a metallic surface. Otherwise, a metallic foil should be bonded to the object.
- Epoxy and acrylic adhesives are recommended or use the self-adhesive version.
- To obtain a strong bond of the absorber to the object, the metallic surface should first be thoroughly cleaned with a degreasing solvent.
- W-Absorber can be readily cut with a sharp knife and template.

■ Specification

Items	LS13-200	LS15-150	LS20-100	LS20-80	LS30-30	LS30-50
Freq. range (GHz)	< 6.0					
Peak &Center Freq. (GHz)	1.3	1.5	2	2	3	3

W-Absorber FA series absorbers are conductive polyurethane foam absorbers impregnated with carbon and used to lower cavity Q in cabinets containing RF amplifiers, oscillators, microwave devices, computer housings, LNBs, and in isolation of antennas due to insertion loss.

It is also used to reduce surface currents on the surface of radiating elements and external ground plane types, and is applied in commercial communications, test boxes, sensors, security and defense fields.

■ Specification
